Professional Summary

Results-driven Software Engineering student (3rd year, CGPA 9.71/10) with proven experience building scalable full-stack web applications and end-to-end ML pipelines. Proficient in MERN stack, RESTful API design, MVC architecture, and Python-based ML with scikit-learn. Hands-on experience with AWS EC2 cloud deployment. Smart India Hackathon 2024 National Finalist with a track record of translating business problems into robust, production-ready solutions.

Education

B.E in Computer Engineering Savitribai Phule Pune University (SPPU) CGPA: 9.71	2023 – 2027
Maharashtra State Board of Higher Secondary Certificate (HSC) Percentage: 82.17%	2021 – 2023

Experience

Data Science Intern – NITS	Jan 2026 – Jan 2026
- Analyzed and preprocessed 10,000+ record datasets using Python, Pandas, and NumPy, cutting data cleaning time by 30 pipeline scripts. - Built and evaluated machine learning models using scikit-learn for accurate prediction and data analysis. - Conducted EDA and built Flask-based web interface, enabling stakeholders to identify trends and make data-backed business decisions.	
Web Development Intern – Edunet Foundation	Aug 2025 – Sep 2025
- Engineered responsive web interfaces using HTML, CSS, and JavaScript, improving page load performance. - Integrated RESTful APIs for dynamic content rendering and backend communication. - Ensured cross-browser compatibility and mobile responsiveness across multiple devices.	

Projects

Wanderlust – Airbnb Clone	Full Stack (MERN)
- Built full-stack rental platform with JWT auth, role-based authorization, property listings, Cloudinary image upload, booking system, and user reviews using MVC architecture. - Optimized MongoDB queries and RESTful APIs to reduce API response time; designed fully responsive React UI with reusable components for seamless desktop and mobile UX.	
Bitcoin Price Prediction System	Python — Machine Learning
- Built an end-to-end ML pipeline using Random Forest on historical OHLCV cryptocurrency data with feature engineering and GridSearchCV hyperparameter tuning. - Evaluated model performance using RMSE and MAE metrics; achieved reduced forecasting error and improved prediction reliability over baseline models.	
AI based Feature Identification from Drone Images	Python — Computer Vision
- Trained a deep learning model to detect and classify geographical features from high-resolution drone orthophotos using image preprocessing and terrain segmentation. - Automated the feature extraction pipeline, significantly cutting manual analysis time and supporting smart urban planning and infrastructure mapping use cases.	

Technical Skills

Programming Languages: Java, Python, JavaScript
Frontend: HTML5, CSS3, React.js, Responsive Design
Backend: Node.js, Express.js, RESTful APIs, MVC Architecture
Databases: MongoDB, MySQL, Query Optimization
Data & ML: Machine Learning, scikit-learn, Pandas, NumPy, EDA, Power BI
Cloud & Tools : AWS EC2, Git, GitHub, Cloudinary

Certifications

- Data Structures and Algorithms in Java – Apna College
- MERN Stack Development – Apna College
- Smart India Hackathon 2024 – Finalist
- Data Analytics – Godrej Infotech
- AWS AI-Powered Cloud Engineer
